Bomb's Music Box Event

Bomb's Music Box Event combines ideas from previous events. It is a modified Stella's shop event combined with threshold reward event. Players collect **Notes (event tokens)** from levels and complete threshold goals. Every time a threshold is completed the player can freely choose which **Music Box** they want to open.

- Adds a bit of 'choice' to threshold events
- Adds more thematics to Stella's Shop Event
- And a bit of musical mystery too!

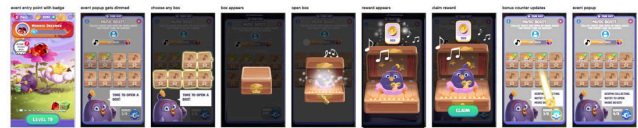

General Flow

Description	Example Image(s)
Bomb's Music Box Event • Event Starts with some thematic text • Players collect 'Notes' (event tokens) from levels • Each time a threshold is reached ◦ Player can freely choose to open any of the Music Boxes ◦ Reward is granted and visualized in the event popup	 

- Claimed rewards visible after claiming
- Claimed items fly into their corresponding places
- All steps are visualized as Music Boxes
- Each Mystery Box contains a quantity of single item
 - May contain various amounts of that item
 - For example, 20 coins OR 4 Pre-level Chucks

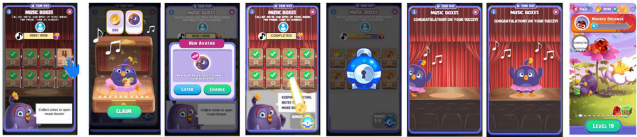

Claiming a reward flow

- Entry point in main hub shows exclamation mark when player has enough notes to claim a reward
- **tapping on it** opens the event popup, that automatically starts to dim the UI, except from the closed box and the character + speech bubble, saying something like “time to open a box!”
- the boxes get highlighted and have a subtle shaking animation, Bomb is animated in a way that prompts player to tap a box (pointing at them or just moving the arms in an encouraging way)
- **after tapping a box**, a big close box appears in the middle, and the animation to open it starts
- the animation first shows a dancing Bomb appearing from the interior of the box
- then the reward appears, while Bomb stays dancing
- then the claim button appears, while Bomb stays dancing (loop animation)

- **After tapping the claim button**, the reward flies and the event popup appears again.
- A note particle flies from the just opened box to the bonus counter.
- the bonus counter gets updated, Bomb bubble speech now says “keep collecting...”
- flow ends, players can leave the popup and keep on playing

Ending Flow (Completing the Event)

Description	Example Image(s)
Completing Music Box Event • When player completes last threshold ◦ They choose to open the last box ◦ Get rewards from that ◦ Unlock event avatar ◦ Bonus counter on the event popup gets updated and completed ◦ Opening chest flow starts ◦ Can see the event popup in finished state ▪ All boxes opened and custom text • Players can still open the event popup as long as it is scheduled	

Bomb host animations

must have:

1. idle
2. box opened (clapping)

nice to have:

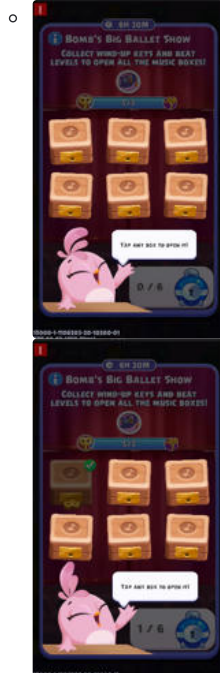

1. open popup (hello)
2. open box (anticipation excitement)
3. end state (looped clapping or dancing to playing musicboxes)

Speechbubbles

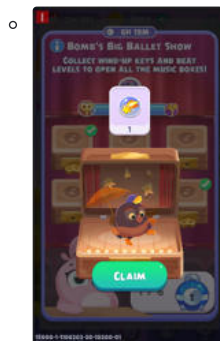

1. generic message when popup is opened on how to start event
2. message to tap a box
3. message praising the player
4. message encouraging the player to keep collecting tokens (this replaces the message # 1 after the player has opened their first box)
5. bonus gift message
6. Endstate message

QA testing

- Event start with badge and info popup
- Until player starts playing, info popup is shown
- User collects and no tier is reached
 - Badge progress updates
 - User needs to tap to open
 - Progress updates
 - No available box to tap
 - Bomb has generic message
 - User can see info
 - User can close
- User collects and tier is reached
 - Badge progress updates
 - Popup opens automatically
 - Progress updates
 - Available boxes are giggling, Bomb, speech bubble and available boxes are on black overlay, already selected boxes are not moving and behind overlay

- Close button is not available, tapping anywhere but boxes does not do anything
- User taps a box to trigger animation
- Animation loops, user cannot skip the animation
- On end of first run, the animation continue looping, Claim button is shown with reward

- User taps Claim to stop the animation
 - Overlay is removed
 - Wiggling boxes stops, all boxes are aligned
 - Box is updated with key and check
 - Reward flies to target
 - When reward reaches target, icon key wiggles and move to bottom left chest
 - On reach of chest, the counter is updated
 - Process is over
- User can tap on selected box(es) to replay the animation
 - On replay, user can tap anywhere to stop the animation
- Bomb displays a congratulation message

- User can see info
- User can close

- User collects (or not) and opens popup
 - Badge progress updates
 - User needs to tap to open
 - Progress updates
 - No available box to tap
 - Bomb has no message
 - User can replay the already selected box(es)
 - User can see info
 - User can close

- User has selected all the boxes
 - Completion reward panel (different from box reward) with chest and black overlay
 - If avatar, avatar panel asks user to set or not
 - Final display with Bomb dancing on stage
 - Curtains opens
 - On opening completion, bomb starts dancing
 - User can close the popup
- When completed, user opens popup and see the dancing and stage section only
 - User cannot replay the box animations

- Important to test
 - During the selection and rewarding process attempting to quit, pause or kill the app.
 - During progress updates ⇒ popup opens again, no effect
 - Box selection ⇒ popup opens again, no effect on restart, user is presented the boxes again
 - During animation ⇒ on restart, popup opens, user is not presented with box selection, the last selected animation plays automatically
 - During Claim button presentation ⇒ same as above

- During reward flying and key icon flying to chest ⇒ on restart, popup does not open automatically,
 - user can tap and open
 - all data shall be updated accordingly
 - no progress update
 - box selection is accurate
 - Chest counter is accurate
- if quitting during last box selection
 - Popup opens automatically to completion reward and moves on avatar and stage dance
 - all data shall be updated accordingly behind reward overlay
 - no progress update
 - box selection is accurate

Reward

Reward process is linear and is not dependent on the box selection.

As a result, first selection will always give the 15 coins, whether user chooses the first, last box or any other box.
