Goals

WHAT💡

- The interactive event is a time-limited mini game event where players **need to collect tokens by beating levels to be able to search for hidden objects in a grid based game board**
 - Additional tokens are granted for Hard and Extreme levels

Team Members/Status

Name	Role (Example)
@Former user (Deleted) (also: Huel Fuchsberger)	Owner/Designer(s)
@Anastasia Kuprina (Deactivated) @Elif Bozdağ	PM(s)
@Marc Estrada (Deactivated) @Johannes Hidén @Janne Kallio @Toni Puronvarsi	Engineer(s)
@Javier Arroyo @Former user (Deleted) @Matei Molner	Artist(s)
@Bethania Lanzaco	Analyst(s) [Before adding a name, check the feature owne

- ☒ Reviewed
- ☒ Approved and Ready for Production
- ☒ Kick off
- ☒ Production
- ☒ Shipped/Live

Changelog

- Jun 3, 2024 *Initial SetUp*
- Jun 12, 2024 *Adding UX, Narrative, et al. content*
- Jun 13, 2024 *Added design details*
- Jun 14, 2024 *Feature kickoff, documented some further details based on feedback.*
- Jun 18, 2024 *Added Intro pop-up & flow(coming up: event will use randomness, no "level designs" required)*
- Jun 19, 2024 *Various, see below:*
- Specified board randomness in the config section (FTUE is exception + moved old board config design to Graveyard section)
 - Added normal, hard, extreme level token reward specs to config section
 - Added further references, including link to RM's **Reveal All** state
- Jun 28, 2024 *Updated FTUE flow to display default tokens of 3 and uploaded Xd file for future use*
- Sep 9, 2024 *Updated event badge UX and desc. + uploaded new version of XD file (OUTDATED)*
- Sep 11, 2024 *Updated event badge UX and description + uploaded latest XD file*

- **Revealing all hidden objects opens the gate to the next room which rewards the player with a narrative reveal and, the a chest of in-game rewards, and the next game board/gate**
- The face of the gate features indents for each of the hidden objects, serving as hints for the player as to which shapes they are looking for and in what orientation
- Unlocks at level ??? [TODO] and will last for **3 days** (configurable)
- Players start the level with 2 event tokens (i.e. "moves")
- Once the player completes all 5 gates or the event timer runs out, the event ends

WHY 🤔

Goals from player POV

- As a player, I want to **play the interactive event to earn rewards**
- As a player, I want to **use few moves as possible to beat the interactive event to feel smart**
- As a player, I want to **spend coins & boosters to speed up the process of collecting tokens** to complete the interactive event
- As a player, I want to **time when I use my moves** in the interactive event during my sessions to **maximise value I get from the rewards**
- As a player, I want to **feel the fantasy of exploring a mystery** where the stakes increase as I progress

Why is this good for the Business?

- These type if events have become a staple of the RM event rotation and offer variety from regular gameplay
- Familiar games from the childhood bring a sense of nostalgia yet add freshness to Dream Blast
- Weekly streak based events are a threat to spender retention, having a mild streak event which involves a player in other (interactive) ways may improve loss aversion while keeping churn low

Error loading the extension!

Background

Initially, we were exploring the following options for theming:

1. Expedition
2. Underwater
3. Fantasy Castle

Ultimately, the "**Fantasy Castle**" theme was chosen for further exploration as it allows us to lean into the game's dream world, differentiate ourselves from competitors, and add variety among the chosen themes for our other events.

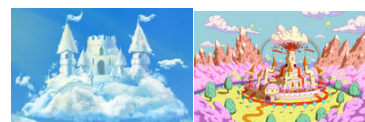

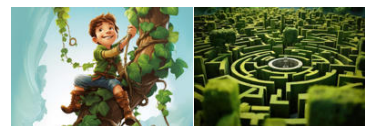

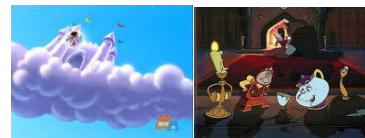

Overarching Theme

- Fantasy-themed castle in the clouds
- Example References:
 - *Beauty and the Beast*, with fantastical versions of existing DB characters
 - *Jack and the Beanstalk*, gigantic objects, vines, castle in the clouds

Thematic Elements

- **Vibe:**
 - Fun, caper-filled dreamy castle in the skies
 - The event is supposed to be a break for players - not high-stakes competition - so this should be an non-stressful, enjoyable experience and the theming needs to support that
- **Explore setpieces:**
 - Clouds, vines, gems, medallions, secret passageways, hidden bookcase doors, treasure room, jewelry boxes, throne/throne room, garden, hedge maze...
- **Explore dream-like fantastical materials:**
 - **YES:** Castles and setpieces made of clouds and vines
 - **YES:** Matchables as a part of the decor
 - either adorning the decor or decor being made up of matchables
 - **YES:** Crystal, ice, cloud
 - **NO:** Medieval castle made of stone and metals
- **Narrative:** Explore idea of rescuing Hatchlings in the castle
 - Hatchlings are playing hide and seek around the castle
 - Mischievous as they are, they are playing where they shouldn't be and have gotten themselves in trouble
 - Upon opening a gate/unveiling a new room, include a hatchling reveal
 - Insert a funny reveal at the end, e.g. the final Hatchling is a helpless, hapless Bomb, who has gotten himself trapped in the castle as well

Reference Images/Moodboards

- Consider options:
 - Bomb is stuck in a booby trap
 - Bomb took a nap in the wrong place
 - Bomb got himself trapped while looking for a snack
 - Other?
- Host character (**TBD**)

Thematic Constraints

Constraints for the rooms:

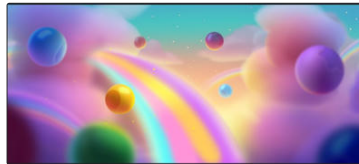

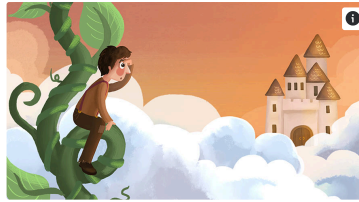

- A clear sense of progression is required from area to area required: from simple, lighter, brighter lit spaces to more complex, darker, deeper locations
- **In order of progression:**
 - a. Garden/Courtyard
 - b. Ballroom
 - c. Gallery
 - d. Throne Room
 - e. Treasure Room
- Communicate clearly higher stakes, higher rewards.

Constraints for the game board and tokens:

- Board and collectible theming need to synergize with the dream castle scene (breaking blocks with a pickaxe is not appropriate), for example:
 - Cutting through overgrown **vines** with a **sword**
 - Cleaning **dust and cobwebs** with a **feather duster** (consider arachnophobes)
 - Blowing away **clouds** using a **bellows**

Constraints for the hidden objects:

- Should be visually valuable, e.g. gems, medallions, character statues, ornate keys (designer preference: medallions or gems - **something that slots into something** is a satisfying interaction and clearly communicable)
- Could/should be connected to our characters if possible, for example:
 - For **gems**, using general character shape + color
 - For **medallions**, using embossed characters
- **Hidden Objects may have duplicates** during a round, and those should look identical (at least for that round)
- By design, required hidden objects and their sizes are written as **h*v (horizontal * vertical)**
- **Hidden objects do not rotate!**
 - Relates to the above statement about size: 1*2 is not the same as 2*1
- **Size matters, the shape does not**, as examples:
 - 2*2 can be a square, circle, heptagon, diamond, et al.
 - 1*2 can be an elongated hexagon, "pill", diamond, or other oblong shape
 - 2*3 can be a teardrop, oval, et al.
 - Keep in mind that during a reveal, even if a little of the shape needs to be clearly and legibly visible to the player (e.g. top left and right squares of a teardrop)
- **Hierarchy of value:**
 - As a requirement, it depends on the execution
 - Hidden objects don't necessarily require a hierarchy of value, although naturally larger objects will look more valuable than smaller ones
 - If themed according to AB characters, a hierarchy of Hatchling at the bottom → Mighty Eagle at the top should be kept

Error loading the extension!

Main Menu

Event badge should be shown on the left together with all other events

Event Badge/Entry Point

- **Basic Functionality**
 - Display the event token in the Entry Point
 - Display the number of tokens as a blip in the top left corner

Example Image(s)

- Display the event timer
- If event has finished, but the player does not have enough tokens for a **Reveal** or **Reveal All**, display the text "Finished" instead of the timer
 - The badge should remain until the player has gone through the associated interaction
- **Post Level:** Collected event tokens fly from the Play button to the Event Badge
- **Progress tracking:** There is **NO NEED** for a radial progress bar in this event badge
- **Gate completable**
 - State shown when the number of tokens is equal to or exceeds the number of unopened tiles in the current room
 - Change the timer into a button, which reads "Reveal"
 - **NOTE** for localization: max char. count is **10**
 - If event has finished, and the player has enough tokens for a **Reveal** use this state
 - The badge should remain until the player has gone through the associated interaction
- **Event completable (Reveal All state)**
 - Shown if the token inventory = number of squares left in total across all remaining boards (i.e. the theoretical max)
 - Change the timer into a button, which reads "Reveal All"
 - **NOTE** for localization: max char. count is **10**
 - If event has finished, and the player has enough tokens for a **Reveal All** use this state
 - The badge should remain until the player has gone through the associated interaction
- **Reward unclaimed**
 - Intermittently display the latest reward chest unlocked if the player if the player leaves the event screen without claiming the reward
 - Change the timer into a "Claim" button
 - **Animate** between the **chest+claim button** and the **basic state incl. the timer**
 - *Animation controls needed:*
 - Play the animation continuously **VS** play the animation once (once in total **or** once each time when entering the lobby)
 - How long the animation remains in each state: the basic state should be up for longer than the chest state
 - e.g. 8 beats in the basic state vs 4 beats in the chest state

Event Screen

Main Screen that contains the game board, rewards UI and hint UI.

General UI

- ☐ Title & Timer
- ☐ Info Button → Opens standard info overlay
- ☐ Close Button

Rewards UI

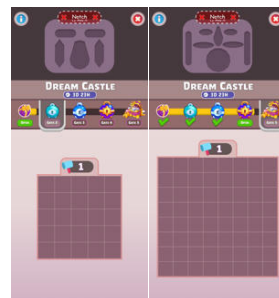

Indicates progress in the event and is used to claim rewards after unlocking them. The player can choose when to claim their rewards.

The event uses **5 reward tiers**, with a clear visual hierarchy of reward chests and room visuals.

The Rewards UI consists of the following:

- **Reward chests:** Chest visuals, in hierarchical order
- **Current progress tab:** indicates current gate/chest being worked on
- **Progress bar:** indicates progress towards next milestone (visible starting Tier 2)
- **Tier number container:** Denoted as Gate #
 - This changes dynamically as follows:
 - **Current gate:** Current gate being worked on should be highlighted in a different color
 - **Open button state:** if player has reached the milestone
 - **Claimed reward state:** display checkmark for claimed rewards instead of the container

Example Image(s)

Examples of each stage:

Hint UI

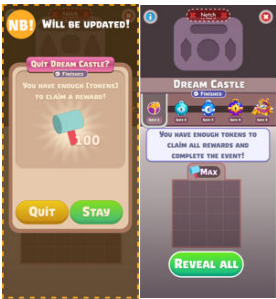

Tells players what shape of pieces are hidden in the game board.

Game Board (Mini Game)

Interactive part of the event screen. If the player has moves, they can start revealing pieces.

Boards and hidden objects required per tier (all areas are denoted in squares *horizontal*vertical*):

Gate 1	Gate 2	Gate 3
Grid: 4*4 Objects: 4 ▶ 2*2 ▶ 3*1 ▶ 1*2 (x2)	Grid: 5*5 Objects: 5 ▶ 2*3 ▶ 2*1 (x2) ▶ 1*3 (x2)	Grid: 6*6 Objects: 6 ▶ 2*1 ▶ 2*2 ▶ 3*1 (x2) ▶ 2*3 (x2)

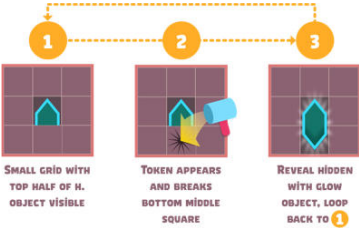

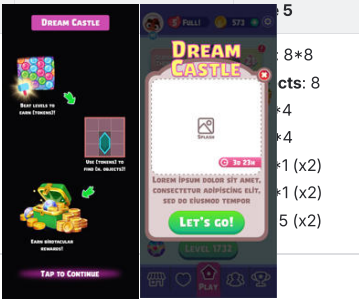

⚠ Important notes about hidden objects:

- Objects and their sizes (squares *horizontal*vertical*) are **PREDEFINED**
- Objects **CANNOT ROTATE**: e.g. 1*2 and 2*1 gems are discrete objects

Tooltips

Display tooltips:

- On tapping an unclaimed chest: display chest contents
- On tapping an already claimed chest: display warning text (*spawn, tween up, fade*)
- On tapping the gameboard with token inventory = 0: display warning text (*spawn, tween up, fade*)

Intro Pop-Up

Intro pop-up with a splash and narrative blurb.

Gate Transition State

When the player finishes gate and moves to the next one (see *Flows* section)

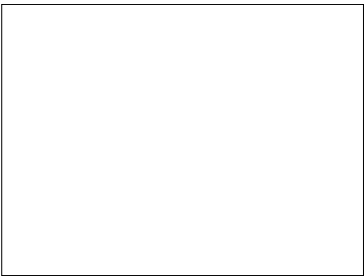

Last Chance State

When the event timer has ended, take the player to the event screen one last time. If the player tries to quit, display a double confirmation.

Completed (Max) State

If player has collected the theoretical maximum for the event (token inventory = number of remaining squares across all remaining boards), initiate a special state wherein the player may tap the "Reveal All" button to automatically play through each reveal. Tapping anywhere on the screen allows the player to fast-forward through the flow.

📺 See reference on Youtube, here (starting at 3:35):

Info Overlay

Tapping the  button opens the info overlay

- If possible, **animate** Step 2 (see image *to right*)

Pre-Level Pop Up and Scoring

The event awards tokens as follows:

- Regular level complete = 1 Token
- Hard level complete = 3 Tokens
- Extreme level complete = 5 Tokens

All three values are configurable

Example Image(s)

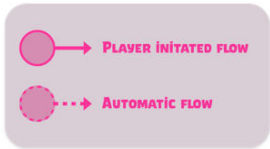

Error loading the extension!

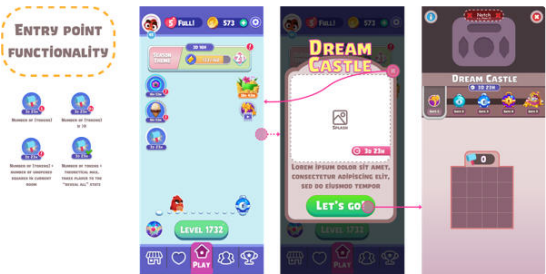

Adobe Xd file

All mockups and flows can be found here:

Lobby, Entry point and event badge functionality

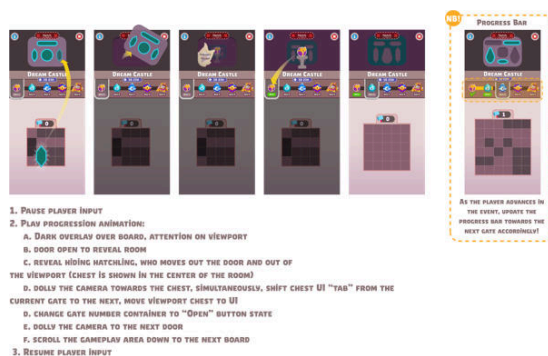

Main Event Screen and Info overlay

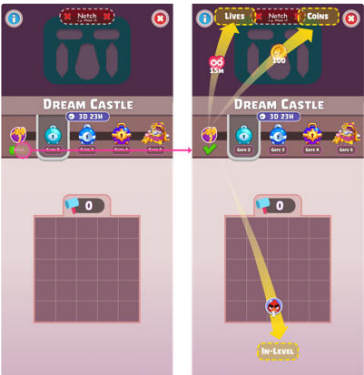

FTUE and Level Flow

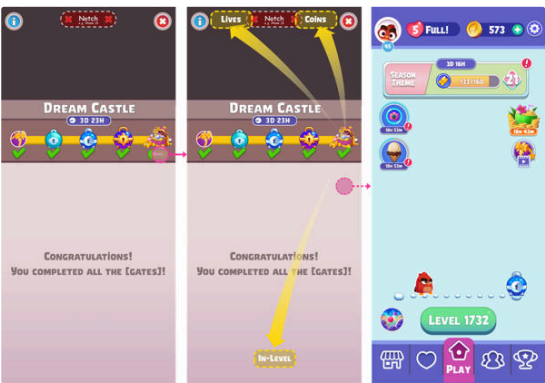

Event progress (Completing a gate)

Reward Claim

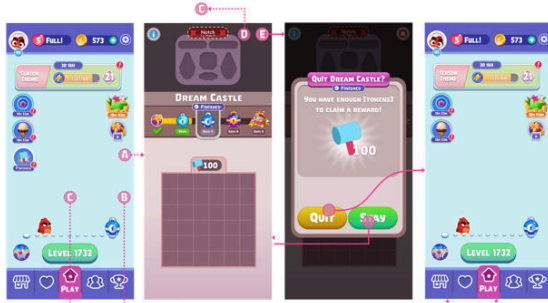

Event Completed

Event Ended

Go to C: PLAYER (USES TOKENS AND) CLAIMS ALL AVAILABLE REWARDS

IF NONE OF THE ABOVE,
OR ABOVE HAS BEEN
RESOLVED, TAKE THE
PLAYER TO THE MAIN
MENU, REMOVE EVENT
ENTRY POINT

SHUT ENTIRELY AND DISPLAY EVENT ENDED POP-UP IF THE
PLAYER DOES NOT HAVE ENOUGH TOKENS TO OPEN A DOOR AND
DOES NOT HAVE UNCLAIMED REWARDS

IF THE PLAYER HAS ENOUGH TOKENS
TO THEORETICALLY OPEN A DOOR
AND REVEAL A REWARD AND THE
PLAYER EXITS EVENT, DISPLAY "QUIT
[EVENT NAME]?" POP-UP

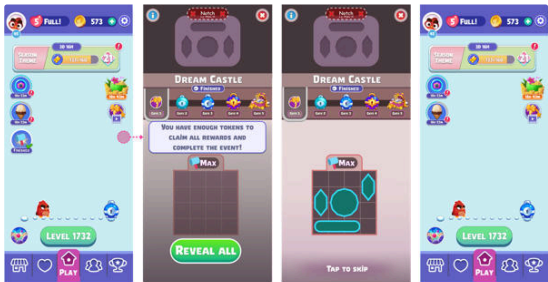

IF TOKEN INVENTORY IS LESS THAN TOKENS
THEORETICALLY REQUIRED TO UNLOCK AN ADDITIONAL
REWARD AND PLAYER HAS UNCLAIMED REWARDS:

► THE PLAYER MAY CLAIM REWARDS INDIVIDUALLY
OR

► IF THE PLAYER TAPS X, AUTOMATICALLY CLAIM
ALL AVAILABLE REWARDS SIMULTANEOUSLY BEFORE
CLOSING EVENT SCREEN

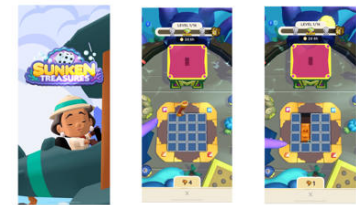

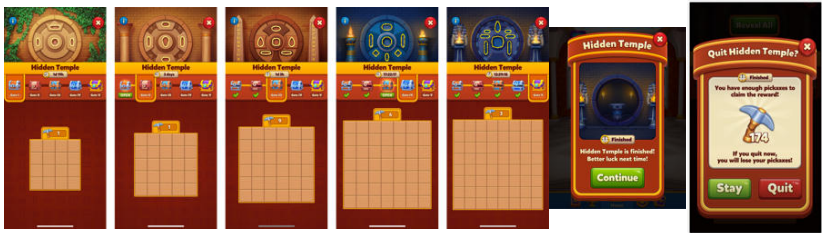

Event Completed (Reveal All)

IF THE PLAYER HAS HIT THE THEORETICAL MAX TOKENS, REPLACE
TOKEN COUNTER WITH THE TEXT: "Max" AND DISPLAY A BUTTON
WITH THE TEXT: "Reveal All" WITH A GRADIENT OVERLAY AND A
HIGHLIGHT ON THE TOKEN UI.

ON TAP (MANDATORY ACTION!)

- FOR EACH BOARD, REMOVE ALL REMAINING TOP LAYER SQUARES
AND PLACE ALL H. OBJECTS ON THE DOOR
- AUTOMATICALLY PLAY THROUGH THE REVEAL ANIMATION
- AUTOMATICALLY CLAIM REWARD AFTER CHEST ANIMATION
- REPEAT FOR ALL REMAINING ROOMS
- ALLOW PLAYER TO FAST-FORWARD THROUGH ANIMATIONS ON TAP
- CLOSE THE EVENT SCREEN AUTOMATICALLY TO THE LOBBY ONCE
PROCESS IS COMPLETE, AND REMOVE THE EVENT ENTRY POINT

Error loading the extension!

- Time spent in levels vs event: we want to make sure not to cannibalize time spent in levels (too much)
- Player Velocity/Level wins per day (we're looking to increase this by 6% as a measure of success)
- Highest gate reached
- How far players were from the next gate
- Look into player's token inventory and cross-reference with player progress to keep track of player behavior, i.e. are they actually interacting with the event?
 - Good to check also: are players opting to **Stay** or **Quit** during the "Quit [event name]?" state

Error loading the extension!

- **Online is required** in order for the event to be served to the player and started.
- **Online is not required** for players to progress in the event or collect rewards.

Error loading the extension!

General Configuration

- The interactive event is always run as 5 tiers (i.e. "Gates")
- We need to be able to configure rewards per tier
- Default token count = 2
- Token count during FTUE = 3
- Tokens awarded by level difficulty:
 - Regular Level = 1
 - Hard Level = 3
 - Extreme Level = 5

Board Functionality

General

- We'll need a randomizer to create levels using board dimensions and hidden objects as specified in the table below.
 - **IMPORTANT: individual hidden objects CANNOT and MUST NOT rotate**, always appearing in the same orientation (e.g. 3*1 and 1*3 are discrete objects)
- Board dimensions are always a fixed number of squares (*horizontal* * *vertical*) and the hidden objects are assigned per board (hidden objects might not repeat across Gates/Tiers/Stages)
 - **NOTE:** While board dimensions in squares horizontal * squares vertical are fixed, their actual dimensions in pixels width*height will need to be adjusted (see Royal Match example under the References section)

Reference table per gate

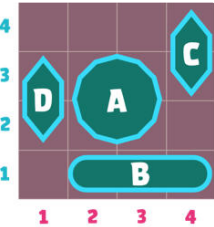

Gate 1	Gate 2	Gate 3	Gate 4	Gate 5
Grid: 4*4 Objects: 4	Grid: 5*5 Objects: 5	Grid: 6*6 Objects: 6	Grid: 7*7 Objects: 7	Grid: 8*8 Objects: 8

▶ 2*2 ▶ 3*1 ▶ 1*2 (x2)	▶ 2*3 ▶ 2*1 (x2) ▶ 1*3 (x2)	▶ 2*1 ▶ 2*2 ▶ 3*1 (x2) ▶ 2*3 (x2)	▶ 3*2 ▶ 3*3 ▶ 1*2 ▶ 1*4 (x2) ▶ 2*2 (x2)	▶ 2*4 ▶ 4*4 ▶ 2*1 (x2) ▶ 3*1 (x2) ▶ 1*5 (x2)
--	---	--	---	--

FTUE Only

- While boards are otherwise randomized, during the FTUE, we will need a preset board design as defined below
 - Note:** if necessary, it's enough for Object **D** to appear in a preset location, the rest may be randomized)
- See FTUE flow for further details

H. Object	Dimensions	x,y position of top-left corner
A	2*2	1,2
B	3*1	2,4
C	1*2	1,4
D	1*2	3,3

Local Notifications

- Send a local notification, when:
 - The event starts
 - The event is about to end, **12 hours before (TBD)**

Error loading the extension!

Audio requirements:

- Music** that fits the fantastical theme
 - The event is low-stakes, cheeky, and a break from more intense events, so the music needs be in service to that
- Sound effects** (requires sync with artists on execution)
 - General UI/button sounds
 - Using a token (e.g. sword cutting through vine, depending on the art execution)
 - Revealing a hidden object
 - Hidden object flies to gate
 - Hidden object slots into gate
 - Gate opens
 - Hatchling VO: chirps/chatter when revealed on opening the gate
 - These should be playful, cheerful, and mischievous, e.g. a simple greeting or even a cheeky "boo!"
 - Final gag reveal VO (Bomb)

Error loading the extension!

Cheats/debug asks:

- +moves
- Next Gate
- Reveal all (from current gate)
- Previous Gate
- Restart the Event
- Complete the event

Error loading the extension!

Write down all the tricky questions that came up during the planning and during the development. Also, remember to write down the answers. This way you can come back to the document and find the answer to a tricky question you solved half a year ago.

Question #1

Answer #1

Question #2

Answer #2

Error loading the extension!

Token Multiplier

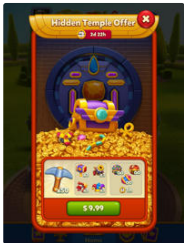

- Royal Match's Hidden Temple provides token doublers periodically as sourced from their Book of Treasures event.
- In order to tackle this, we would need an event-specific doubler.
- **To consider:** Daily (possibly player-initiated?) token doubler for this event

Purchasing Tokens

Something to consider in the future is the option to purchase event tokens as a part of a bundle. In order to implement this, we should consider:

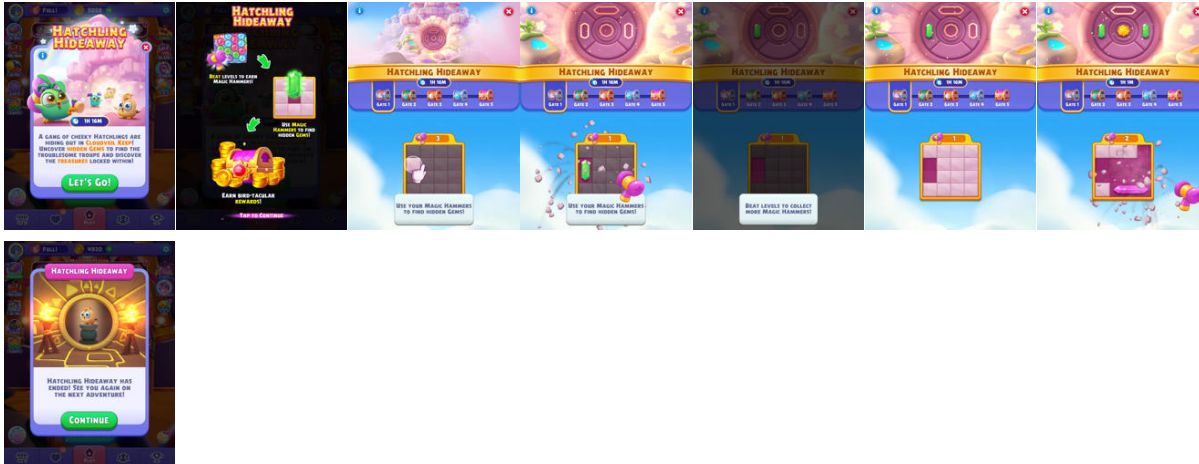

- Which players is this for/who is this shown to?
- When to show this, e.g. for players only at Tier X (TBD) in the event with a low token inventory count?

Reference image:

Original thread here (NB! F&E Private Channel): <https://rovioentertainment.slack.com/archives/C04PTC191EH/p1716891979420799>

Error loading the extension!

Error loading the extension!

⚠️ *** PLEASE IGNORE DURING DEVELOPMENT, STORED FOR FUTURE REFERENCE ONLY *** ⚠️

Board Configuration

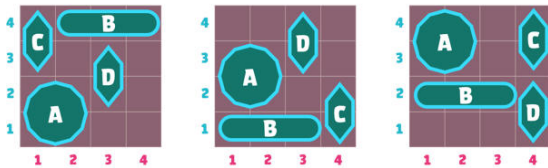

- We need to be able to configure a few variants of each gameboard (i.e. "level designs"), which are randomized at the start of each Gate (and per each player)
- Each variant can appear in one of two rotations: **0° and 180°**
 - ⚠️ **IMPORTANT:** A **rotation ALWAYS** means the **entire configuration of hidden objects** - **individual hidden objects CANNOT** and **MUST NOT rotate**, always appearing in the same orientation
- Board sizes are always a fixed number of squares (*horizontal * vertical*) and the hidden objects per board are always the same, as per the table below
- For each board, we need to be able to define the following for the hidden objects:
 - The object ID (A, B, C, D, E, F, G, H)

- Object dimensions (h*v)
- The x,y coordinates of the top-left corner of the piece
- It should always be possible to create more board variants via configuration, but 3-4 boards per gate that can appear in either 0° or 180° rotation should be enough to start with
- **FTUE Only:** We will also need a separate "Tutorial board" which is only used during the FTUE.

Example:

- Gate 1 has a 4*4 grid and contains 4 hidden objects.
- Given 3 variants of the Gate 1 board (as shown below), we have the following configuration.

H. Object	Dimensions	Board Variant 1	Board Variant 2	Board Variant 3
A	2*2	1,2	1,3	1,4
B	3*1	2,4	1,1	1,2
C	1*2	1,4	4,2	4,4
D	1*2	3,3	3,4	4,2

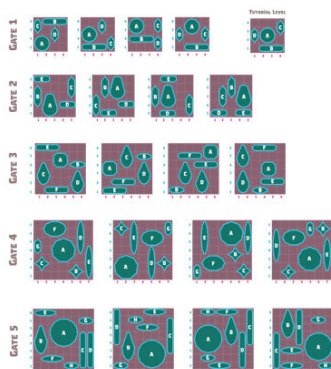

Reference table per gate

Gate 1	Gate 2	Gate 3	Gate 4	Gate 5
Grid: 4*4 Objects: 4 ▶ 2*2 ▶ 3*1 ▶ 1*2 (x2)	Grid: 5*5 Objects: 5 ▶ 2*3 ▶ 2*1 (x2) ▶ 1*3 (x2)	Grid: 6*6 Objects: 6 ▶ 2*1 ▶ 2*2 ▶ 3*1 (x2) ▶ 2*3 (x2)	Grid: 7*7 Objects: 7 ▶ 3*2 ▶ 3*3 ▶ 1*2 ▶ 1*4 (x2) ▶ 2*2 (x2)	Grid: 8*8 Objects: 8 ▶ 2*4 ▶ 4*4 ▶ 2*1 (x2) ▶ 3*1 (x2) ▶ 1*5 (x2)

Board Designs Config Sheet and Mockups

Board design configs are stored in the following sheet. Mockups included for reference below.

[Sign in to access Google Drive Spreadsheet](#)

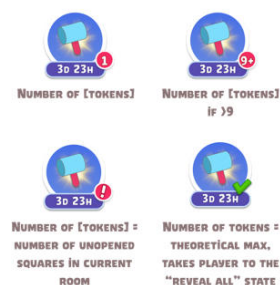

Cheat Prevention

NO LONGER NEEDED DUE TO RANDOMIZED BOARD DESIGNS

- The biggest concern in terms of Cheat Prevention is players sharing screenshots of the hidden object locations
- This is counteracted by having enough board configurations per gate, which are in turn randomized per gate and per player

Old Event Badge Functionality

- ☐ **Simple version:** Display the event token in the Entry Point
 - ☐ **Stretch goal:** if feasible and appropriate for our theming, display the a stylized version of each of our gates instead (this is how benchmark game Royal Match does it)
- ☐ **Notification blip indicates amount of tokens (moves)**
 - ☐ If <9, display a number 1-9
 - ☐ If >9, display 9+
 - ☐ If token inventory $\geq$ number of squares left on the current board, display exclamation mark (!)
- ☐ If token inventory = number of squares left in total across all remaining boards, display checkmark
- ☐ If event has finished the badge should stay until player has gotten the **Last Chance** flow, displaying "Finished" instead of the timer

Post Level

- ☐ Collected event tokens fly from the Play button to the Event Badge

Note

Should function as regular badges where the radial progress bar shows progress towards the current gate. Also displays a event timer as usual.
