

WHAT 💡

- **Flock Rush** is a **1-hour competitive event** in which **5 players compete** to **collect the most tokens**
 - The event is still configurable for as many players as desired
- **Tokens** are **awarded** based on **points** derived from:
 - A **multiplier** granted for **chaining successive bird explosions during one move**, which multiplies...
 - The **sum of points** designated **per bird** in the chain (the higher level the bird, the higher the points)...
 - The **total** of which is multiplied by a **level difficulty multiplier**
- **Players opt in to the event**, which when started grants them 1 hour of unlimited lives
- **Duration:**
 - The event is available for **24 hours** at a time, however the event, once joined, lasts for **1 hour**
 - The event is possible to join at any time during its availability for the full 1 hour (i.e. a player can join after 23H 59M have elapsed and still play, even if it is with Ghosts as a fallback)
 - Calendar event should be set up for an hour longer than what is displayed to the player
 - E.g. a 24-hour event lasts for 25 hours, but the player sees 24 hours in the event.
- **Rewards:**
 - Rewards are granted (primarily only) to the top player in the leaderboard at the end of the event
 - The configuration allows for granting a reward to any number of players in the leaderboard
- **Using real players vs Ghosts (⚠️ TO BE UPDATED):**
 - We want to populate the leaderboards with **real players** where possible, but we will also implement a **Ghost system** as a fallback
 - **Ghost System Summary:**
 - We will have a few different "player archetypes" that aim to simulate different styles of play and levels of participation in the event
 - Ghosts will be given a range of possible final scores, and the system will choose a value from between the two, inclusive

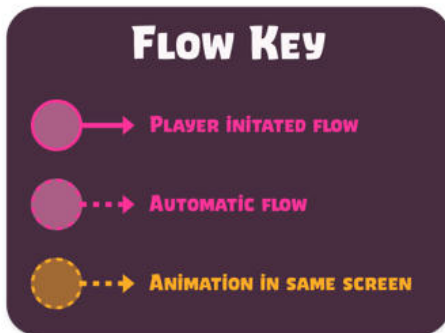

- Ghosts gain a percentage of progress towards a final score over time, every 180 seconds, until 3600s have elapsed and 100% of the assigned final score has been reached
- Real player scores will be collected during an initial Tier 3 country launch before releasing globally,
- Initially, ghost scores will use our best estimates for final score ranges based on our own internal playtests
- For further technical details on the implementation, **please refer to the [Beacon Configuration](#) section**

WHY 🤔

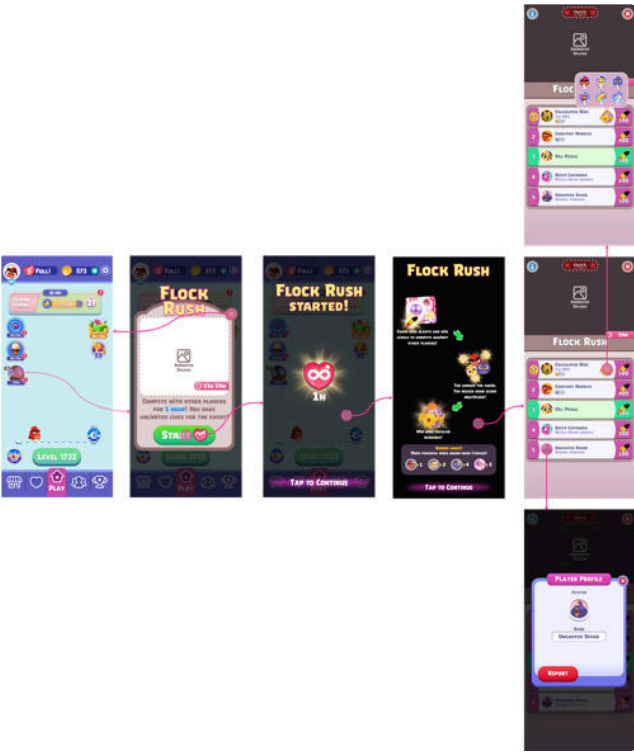

Goals from player POV

- *As a player...*
 - *I enjoy having a daily task or challenge to complete*
 - *I like having the choice of when to engage with my favorite game for a longer session*
 - *I enjoy fast-paced and high-stakes competition*

If a player cannot participate in the event at all please compensate them with all of the rewards for the event except for the season pass tokens.

So add 1 of each bird power-up and one slingshot power-up.

Macro name →

Macro text → Unfortunately, we cannot adjust scores for the Flock Flurry event. Since you could not compete in this event properly, we have added the rewards for the event, which are 1 for each bird booster and one slingshot power-up.
